Drug safety surveillance on demand

Reactions Pharmacovigilance Insight is a comprehensive database of drug safety and adverse drug reaction information from Wolters Kluwer's industry leading publication Reactions Weekly. It is the fastest and easiest way to discover the adverse drug reaction case reports, drug safety studies and regulatory news impacting your business and affecting your competition.

Updated daily, with a historical perspective dating back to 1982, this database provides comprehensive coverage of adverse event case reports from the literature as well as selections of the latest pharmacovigilance, regulatory news, adverse reactions research, and current opinion.

Reactions Pharmacovigilance Insight is designed to help you:

Simplify adverse drug reaction event monitoring required to meet your regulatory reporting obligations

Identify drug safety signals from timely and accurate information

Gain a competitive advantage by better understanding the safety issues for all the drugs in your market

Exhaustive literature monitoring

- Over 6,000 journals plus their companion supplements including all relevant Medline and Embase indexed journals
- Proceedings from more than 100 major scientific meetings
- Newsletters from national centers participating in the WHO International Drug Monitoring Programme
- Regulatory agency websites
- Media releases

Rapid access to specific information

- Detailed searching by drug, drug class, adverse event, country, subject group, or publication information
- Links to full text articles through your link solver solution
- Links to summaries of key clinical trials containing adverse reactions
- Chart multiple records in a consistent format
- Export data in multiple formats for manipulation or sharing

Pertinent information in an easy-to-read format

- Case report summaries comply with CIOMS II guidelines for PSURs
- Full reference information for the original publication provided
- Serious, overdose, interaction and first published cases identified
- WHO contextual adverse event data included for first reports

Notification of new information relevant to you

- Customized drug safety alerts delivered directly to your desktop
- Delivery on your schedule – daily, weekly, monthly
- Only content relevant to you, not just everything that is new
